

REDUCE RISK with GUEST TOWELS

Guest Towels

Using paper Guest Towels are a better alternative to air dryers - reduces the spread of germs and bacteria.

Recommend holding a Guest Towel as a barrier to restroom door handles upon leaving.

80% of common infections are spread by our hands. Effective hand washing remains the best defense.

Blow drying vs paper towels?

- Jet dryers increase bacteria count by 42%
- Hot air dryers increase germs by up to 94%. Heat from the dryers encourages bacteria to multiply.
- Paper towels will decrease the number of germs on your hands by up to 77%
- According to a 2012 study of hand drying methods in the medical journal, "Mayo Clinic Proceedings", using paper towels creates friction which helps physically remove bacteria.
