

REDUCE RISK with PAPER TRAYCOVERS

Did you know?

Disposable Paper Traycovers

Using a disposable paper traycover is a better alternative than an unprotected tray or a textured Cambro tray – over 50% of surfaces are missed completely during manual cleaning

- Traycover protection on an average has 60% less bacteria than an unprotected tray
- Traycovers provide a germ barrier from the spread of bacteria – 40% of high-touch surfaces have been inadequately disinfected
- Paper traycovers have a low bacterial colony count; there is zero opportunity of catching a bacterial disease from a paper traycover
- Traycovers keep trays clean and sanitary during meal delivery
- Non-Skid option available to prevent slipping and spills
- Remember: only 20% of people wash their hands before preparing food and 39% before eating food
