Don’t Let Germs Take Over Your Environment

Kills bacteria and viruses in as fast as 30 seconds
Did you know many competitive products require 10 minutes to kill bacteria and viruses? By harnessing the unique power of hydrogen peroxide, Clorox disinfects in as fast as 30 seconds — significantly faster than other leading non-bleach disinfectants on the market today.*

Registered to kill more germs of high concern
It’s important that the disinfectant you choose kills the germs that are of greatest concern to public health. Clorox® Hydrogen Peroxide Disinfecting Cleaners are registered to kill more problematic germs than the leading competitive products* — helping you better protect your environments from the spread of germs.

* Versus leading competition based on Federal EPA Master Label comparison (as of April 2013). Use as directed on hard, nonporous surfaces.
A new solution from Clorox

Clorox is proud to offer patented and proprietary hydrogen peroxide technology that offers disinfecting and powerful cleaning.

Better user experience

Clorox® Hydrogen Peroxide Disinfecting Cleaners are designed to be easier on those who use them on a regular basis.
- No harsh chemical fumes or smell
- Less irritating for skin
- No fragrances or dyes added
- Non-combustible, non-staining

Kills germs of public concern

When disinfecting, it’s imperative that you are effectively killing the bacteria and viruses that can be most problematic to public health. Clorox® Hydrogen Peroxide Disinfecting Cleaners are EPA-registered to kill more of these high-risk germs than other competitive, ready-to-use wipes and sprays on the market today.*

FACTS ABOUT HYDROGEN PEROXIDE

Breaks down soil and stains, destroys odors and provides color-safe bleaching action.

An effective germ killer, it causes bacteria and viruses to quickly decompose, rendering them harmless.

Degrades quickly into water and oxygen after use, leaving no active residue behind.

Does not deliver troublesome gaseous release or chemical residues associated with other chemical oxidants.

Economics of Clean

Faster contact times for disinfecting

When you need to disinfect those high-touch “hot spots” (think desktops, handles, faucets, water fountains, locker room surfaces, etc.) — you can’t afford to use products that require long contact times to kill germs. Clorox® Hydrogen Peroxide Disinfecting Cleaners kill germs and viruses of highest concern in as fast as 30 seconds* — so you can feel confident you are getting the job done, quickly and efficiently.
